

PROFILE

Hello, I'm Emanuele Zanardo, an electronics engineer with a degree from SUPSI. I come first of all from a technical institute that trained me to become an electronic technician specializing in automation and then I decided to face the challenge of becoming an electronic engineer. During college I developed an interest in engineering in general and not just electronics.

I am a dynamic person and suited to teamwork. I like to develop projects of all kinds, especially those related to my studies in electronic engineering but also everything that revolves around the design and/or management of processes. Thanks also to the university I was able to carry out some very interesting projects regarding electronics such as the creation of embedded systems, software development in different programming languages, management of solar generation plants with storage.

Previously, I worked as an electronic engineer within the company FZsonick (Horien group) in Stabio. The company produces molten salt batteries and provides ready-to-use storage systems. I was part of the R&D team and dealt with two main tasks:

- HW&FW test engineer for our battery management systems
- Project manager for UL 1973, IEC 61508, ABS certifications.

I currently work as an After-Sales Technician at CENTIEL in Cadro. The company designs and manufactures industry-leading, energy-efficient UPS systems for critical infrastructure. As part of the global technical support team, I deal with two main tasks:

- Field commissioning, on-site maintenance, and testing in high-tech environments, including CyrusOne datacenters.
- Remote troubleshooting, customer technical training, and autonomous management of factory witness tests for international clients.

I hope the brief description of myself was exhaustive. If not, I am available for any questions via the Linkedin profile or the email address in the CV.

SKILLS

- C Programming (Embedded)
- STM32Cube & Keil IDE
- Hardware & Firmware Validation
- Product Device Certification
- Version Control (Git / SVN)
- Electronic Measurement Equipment
- AI Tools & Automation
- Stakeholder Communication
- Technical Adaptability
- Workflow Organization

EMANUELE **ZANARDO**

Electronic Engineer

PROFESSIONAL EXPERIENCES

After-Sales Engineer - CENTIEL

January 2026 – Present

Centiel is a leading Swiss manufacturer of energy-efficient UPS systems for critical infrastructure. As an After-Sales Technician based in Cadro, I ensure the maximum reliability and availability of these systems for clients worldwide. My role requires hands-on field expertise to perform remote troubleshooting, on-site maintenance, and complex field testing and commissioning in high-tech environments, including CyrusOne datacenters. Additionally, I drive customer engagement by building strong relationships, independently managing factory witness tests, and delivering specialized technical training. To ensure continuous improvement, I collaborate closely with R&D and engineering teams, analyzing field data and recurring issues to propose actionable product enhancements.

Test & Certification engineer - HORIEN Salt Battery Solution

October 2021 – January 2026

Horien group is a world leader in designing and manufacturing molten salt storage systems for backup power, sustainable mobility and energy storage applications. Currently I hold the position of Electronic Test & Certification Engineer. My work mainly consists of product certification, test writing and verification of our products. Therefore the purpose of my work is to put the products under stress by performing tests and at the end actively engage with the designers by proposing FW (C language) or HW patches that improve the product. In addition, I am a project manager in the field of certification, the certification projects completed concern UL 1973, UL1741, IEC 61508 and ABS regulations.

INSTRUCTION

Bachelor of Science in electronic Engineering (SUPSI, Lugano)

September 2018 - September 2021

The degree course in Electronic Engineering is strongly practice-oriented with laboratories and exercise blocks for each theoretical part. Semi-annual projects e diploma projects (degree theses) are often proposed by partner companies: a further opportunity for professional development for SUPSI graduates.
